

Ariston Genus Premium Hybrid 30 installation and field test on the Hungarian market.

Budapest, 2011

Ariston Thermo Hungária Kft is the condensing marketleader on the Hungarian market in the domestic segment (12kW-35kW). In this case it is giving a responsibility to drive the Hungarian heating-business market with a new condensing-renewable products. We introduced on the market first time the Hybrid solution. Our competitors are going to come with this product on this season (Viessmann, Bosch, Duval and Baxi) after Ariston.

Up to now we sold on the market 13 pieces (from april-jun)

Under the first ignition we noticed the next informations:

- 2 pieces was installed on undrefloor heating 2 pieces on wall heating

- (we do not suggest it for radiator up to now)

- 2 new houses, 2 old houses, (160-280m2)

- All the installation is working with two heating zones and two room thermostat (one is allways Climamanager)

First ignition impressions:

- On the maximum power the heat pump works very well and very silent.
- We have installation long beetween the heat pump and the boiler 18 meteres (no problem)
- Gives hot water very well
- The endusers are very satisfied up to now. We substituted only conventional boilers, already the with the DHW consumption the gas consumption is cheapper than the oldone .

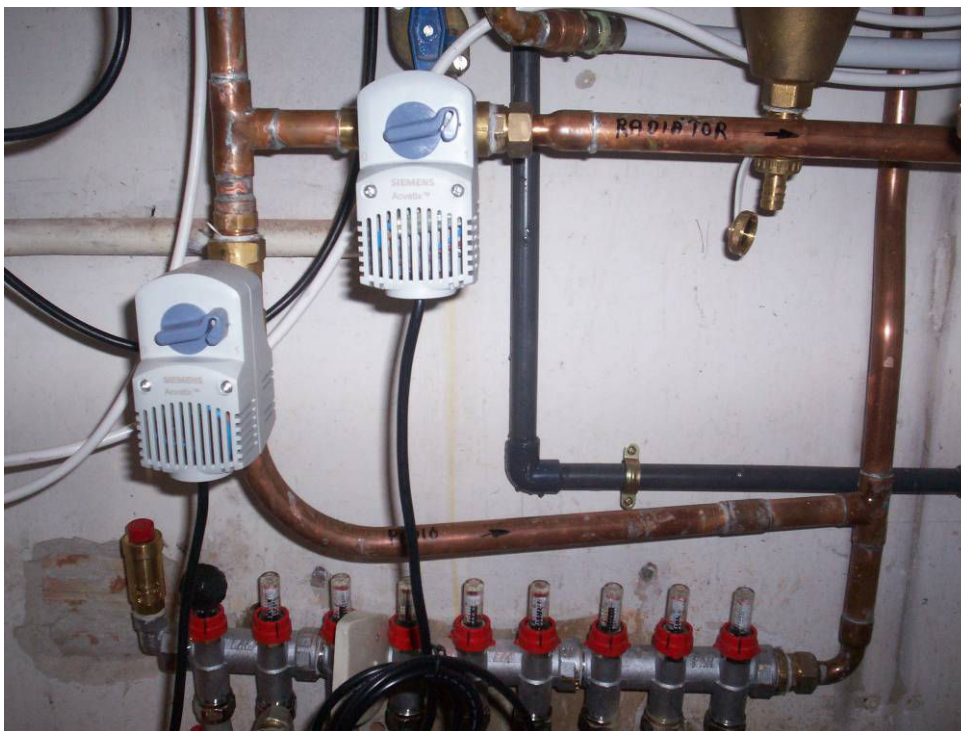

A few installation picture:

Thank You very much
